

## Global Climate Change Impacts in the United States

The publication, Global Climate Change Impacts in the United States, produced by a coalition of agencies and scientific institutions at the request of the U.S. Global Change Research Program (USGCRP), summarizes the science of climate change and the impacts of climate change on the United States, now and in the future. Sections also focus on specific regions, including Alaska, the Pacific Northwest, and the Southwest.

An expert team of scientists operating under the authority of the Federal Advisory Committee Act, assisted by communication specialists, wrote the document. The report was extensively reviewed and revised based on comments from experts and the public. The report was approved by its lead USGCRP Agency, the National Oceanic and Atmospheric Administration, the other USGCRP agencies, and the Committee on the Environment and Natural Resources on behalf of the National Science and Technology Council.

Read the [Full Report](#), [Executive Summary](#), and Sections on [Alaska](#), [Pacific NW](#), and [Southwest](#) regions.
