

## Welcome to the Oregon C.R.A.B. Project Website!

The Oregon C.R.A.B. (Collaborative Research to Assess Bycatch) Project was created to determine mortality rates of Dungeness crab (*Cancer magister*) that are discarded from Oregon's crab pot and trawl fisheries.

This research represents a collaboration between members of Oregon's fishing and scientific communities. Please call or email if you are interested in getting involved; increased collaboration will contribute to the success of this project!
