

The US Army Corps of Engineers (Corps) has an on-going clamshell contract within the Coos Bay Federal Navigation Channel. The material is being disposed of at the Ocean Dredged Material Disposal Site H. The attached chart specifies the tow lane and disposal site the Contractor has agreed to utilize in order to minimize impacts to commercial crab pots and gear. Any gear located with the red tow lane shown on the attached chart are placed at the commercial fishermen's own risk and are not subject to reimbursement by the Corps or any companies under contract with the Corps. Please avoid placing gear within this lane, as the tug and scow will likely damage any gear placed within this lane.
