Pacific Herring in Puget Sound

- One of a few critical forage species that support diverse birds, mammals, and fishes
- Juveniles and adults wide-spread during most of the year
 - Aggregate in late winter to spawn on subtidal macrovegetation in spring and early summer

Herring Stocks

- 21 spawning 'stocks' have been identified in the Sound
- Spawn from Jan-April, except Cherry Point (April-June), on shallow subtidal vegetation

Assessment Methods

- Abundance estimates made since 1970s
- Acoustic/trawl surveys (cut after 2009)
 - Charter vessel + 2-3 WDFW staff fishing on pre-spawners. 2nd acoustics boat with 2-3 staff.
 - ~7 surveys/stock/year = ~125 surveys
- Spawn deposition surveys using vegetation grapple (ongoing)
 - Several 2-person crews in small Zodiacs
 - ~10 surveys/stock/year on biweekly to weekly basis = ~150-175 surveys = 6k-7k lines of data

- Even Write-in-the-rain paper wrinkles
- Data sheets can be lost
- Data must be transcribed
 - Pencil smears
 - Poor penmanship
 - Transcription errors

Data Entry/Storage Pre-2014

- Preliminary error-checking in the field, immediately post-survey
- All fields from data form hand-keyed into Access database within days of a survey
 - Post-season a second round of review occurs
- Hard copy data sheets retained indefinitely in archive boxes/binders
- Database eventually backed up on WDFW servers after full season complete

Brief overview of iForms

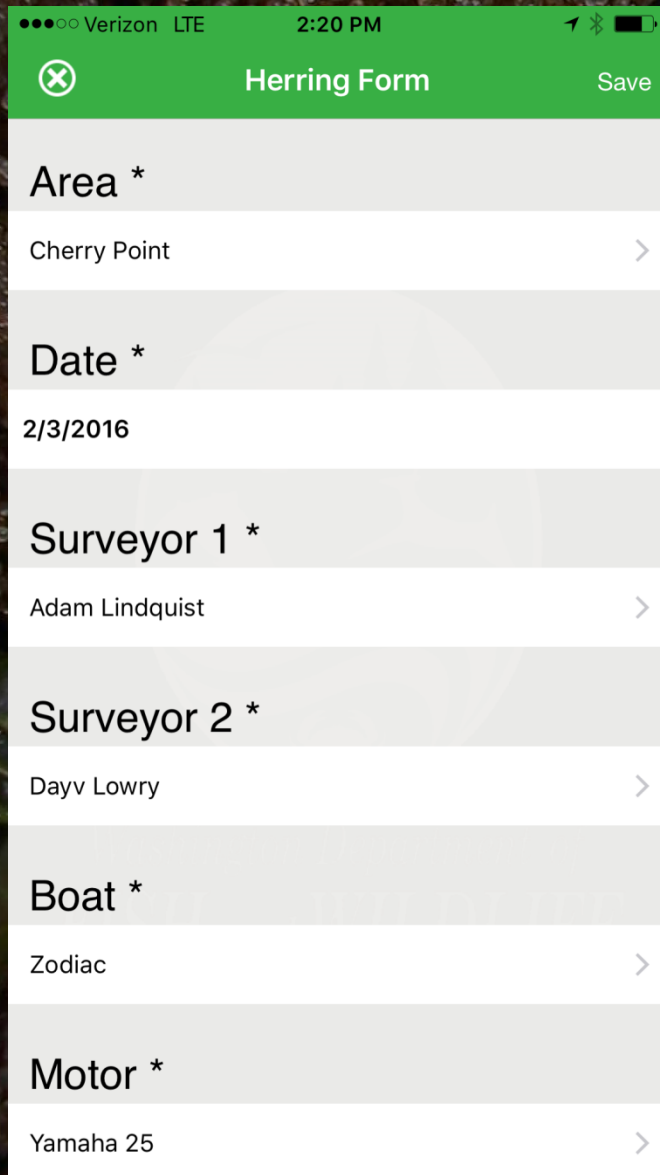

- Cloud-based portal accessed via web browser
- JavaScript-based flexible form building tool with broad array of customization options
 - Widgets abound; links to other apps “seamless”
- Can send notifications and assign workflow
- User management occurs at several levels
- iOS and Android apps available
- Collect data offline then sync to servers
- <https://www.iformbuilder.com>

Data Collection – 2014+

- iPad running iForms replaces both GPS and paper data form
- Data entered into fully customized form with drop-down menus and task-specific widgets
- Immediately post survey, data are backed up to the iCloud. If weak/no signal, data are placed in a queue or user can manually sync
- Data are pulled from cloud to back-end SQL Server database and pushed to Access client

iForms Data Entry

The screenshot shows a mobile application interface for a 'Herring Form'. The status bar at the top indicates 'Verizon LTE' and '2:20 PM'. The form has a green header with a close button (X), the title 'Herring Form', and a 'Save' button. The form contains several fields, each with a required field indicator (*):

- Area ***: Cherry Point
- Date ***: 2/3/2016
- Surveyor 1 ***: Adam Lindquist
- Surveyor 2 ***: Dayv Lowry
- Boat ***: Zodiac
- Motor ***: Yamaha 25

- Drop-down menus and selection lists constrain entered values. Validation rules can “proof”
- Menu options can be context-specific and constrained to minimize scrolling

Costs/Savings of New System

- 2 iPads + LifeProof Cases = $2 * \$760 =$ **\$1520**
- Development hours for iForms = $20 * \$42 =$ **\$840**
- 6 months cell data service per iPad = $2 * (\$31 * 6) =$ **\$372** annually
- Data entry/QA_QC savings = $50 * \$37 =$ **\$1850**
- Annual ledger
 - YR1 = **\$882**
 - YR2 = **\$968**
 - YR3 = **\$2818**
- iPads used for 6 mo. of the year and can be retasked
- \$30/mo. lease option

Additional Benefits

- Validation rules and list-based data entry reduces errors to near 0% for many fields
- Widgets replace stopwatch, other tools
- Lack of need to transcribe eliminates one of the most error-prone steps
- Local and cloud-based storage means backup is instantaneous
 - ThunderPlug an option for backup in remote data collection situations = \$800 “server in a backpack”
- “Freeing” of staff time = focus on other tasks

It Ain't All Roses . . .

- There can be growing pains and keeping your old gear on hand is advised . . . For a bit
 - “Dry lab” some data first to get the flow right
 - Be prepared for the first deployment to fail
 - See Jamie Fuller’s poster for another pilot effort
- What happens if you lose/damage your iPad and need a new one?
 - At least the data are backed up immediately
 - Tracking and even remote wiping, there’s an app for that!

Next Steps

- Continue to use iForms for herring surveys
 - Work toward pushing “near live” data to web
- Designed/designing iForms for:
 - Plankton tows, stomach contents, sample request logging, genetics, etc. on trawl vessels
 - SCUBA diving logs
 - Vessel and gear maintenance records
 - Tracks in-field repairs to ROV and other tools and allows quick linking to manufacturers’ parts lists

In Conclusion

- iForms lends itself very well to linear, highly repeatable data flows with known limits to data input options
- Implementation can be very affordable
- Issues with failure to faithfully transfer data are eliminated = reduced error rate
- Data security increased by “instant” backup
- Savings in staff time allow greater efficiency and increased productivity

Thanks to The Team

- Thanks to the members of the PS MFS Unit for unending devotion to the pursuit of perfection \pm (X% / hrs of sleep)
